

SkySpaces.io - Terms and conditions

Last Updated: August 18, 2020

- You agree to **not** upload or download content violating the current laws.
- We do **not** scan the files content and are not responsible of the effects of downloading malicious files. Be careful when using a Skylink and take the same precautions as when downloading any other internet file.
- We reserve the right to block the access to any file, including dangerous files or those violating the laws.
- We will do our best to keep the files "pinned" for as long as possible, but we can't guarantee their long-term availability. The best way to ensure a file is available is pinning it by yourself using your local Sia client. After pinned, and while you pay for its storage, the file will be available to download from this or any other portal.
- SkySpaces does not store on its servers any uploaded file. Instead, it acts as a mere public access point for the Sia network. The data will be stored on the Sia "hosts" (the actual storage providers of the network).
- For more info about how Skynet portals work, visit siasky.net.
- Contact us using the email at the footer of this website for any question or inquire.
